

Increase your success
thanks to greater
production efficiency.

UNITED GRINDING Digital Solutions™

MÄGERLE | BLOHM | JUNG | STUDER | SCHAUDT | MIKROSA | WALTER | EWAG

Do you have the
experience? Machine
downtimes that always
happen at exactly the
wrong time?

Are your machines
utilized to their full
capacity?

Would you like to
have a better
overview of your
machinery?

Digitalization is securing the road into the future –
and your ability to be competitive tomorrow.

As experienced machine manufacturers, we understand your challenges. That's why we are developing solutions that will make you even more successful.

The first digital products are already available, and more are under development. Talk to us about your digital future; you are important to us!

CONNECTIVITY

Digitalization means networking –
connecting people, machines and systems.

Networking is just the beginning, without networking there would be no communication, without communication there is no overview of the data in your production environment and without an overview of the entire process, potential improvements remain undiscovered.

USABILITY

Digitalization simplifies things –
even the operation of complex machine tools.

Intuitive machines that can be operated in a uniform manner simplify the work and save on training time. An individualized user interface shows each user what is needed.

This simplicity creates more efficiency and reduces sources of error.

MONITORING

Digitalization enables transparency –
a prerequisite for identifying optimization
potential.

Data chaos is a nightmare! Clearly displayed
and visible at any time – even with remote
access – data is valuable and helpful. It
enables you to understand processes and
forms the basis to optimize them.

PRODUCTIVITY

Digitalization ensures maximum capacity utilization – and therefore increased productivity.

Operating machines with optimal efficiency, improving capacity utilization, reducing maintenance costs, increasing efficiency: this can be achieved with networked data. Intelligently evaluated data provide the optimal basis for decision-making to increase productivity.
